

CENTRALIZED VACUUM SYSTEMS

For large working environments, over long distances

ONE SOLUTION ENDLESS POSSIBILITIES

A centralized vacuum system allows the **simultaneous suctioning** of material from different points of a plant and its discharge in a single site, so as to simplify both collection and disposal operations.

Thanks to their flexibility, centralized vacuum systems can be used either to enhance the efficiency of cleaning cycles or to be integrated in production processes where continuous suctioning is required.

**CLEANLINESS
AND EFFICIENCY**

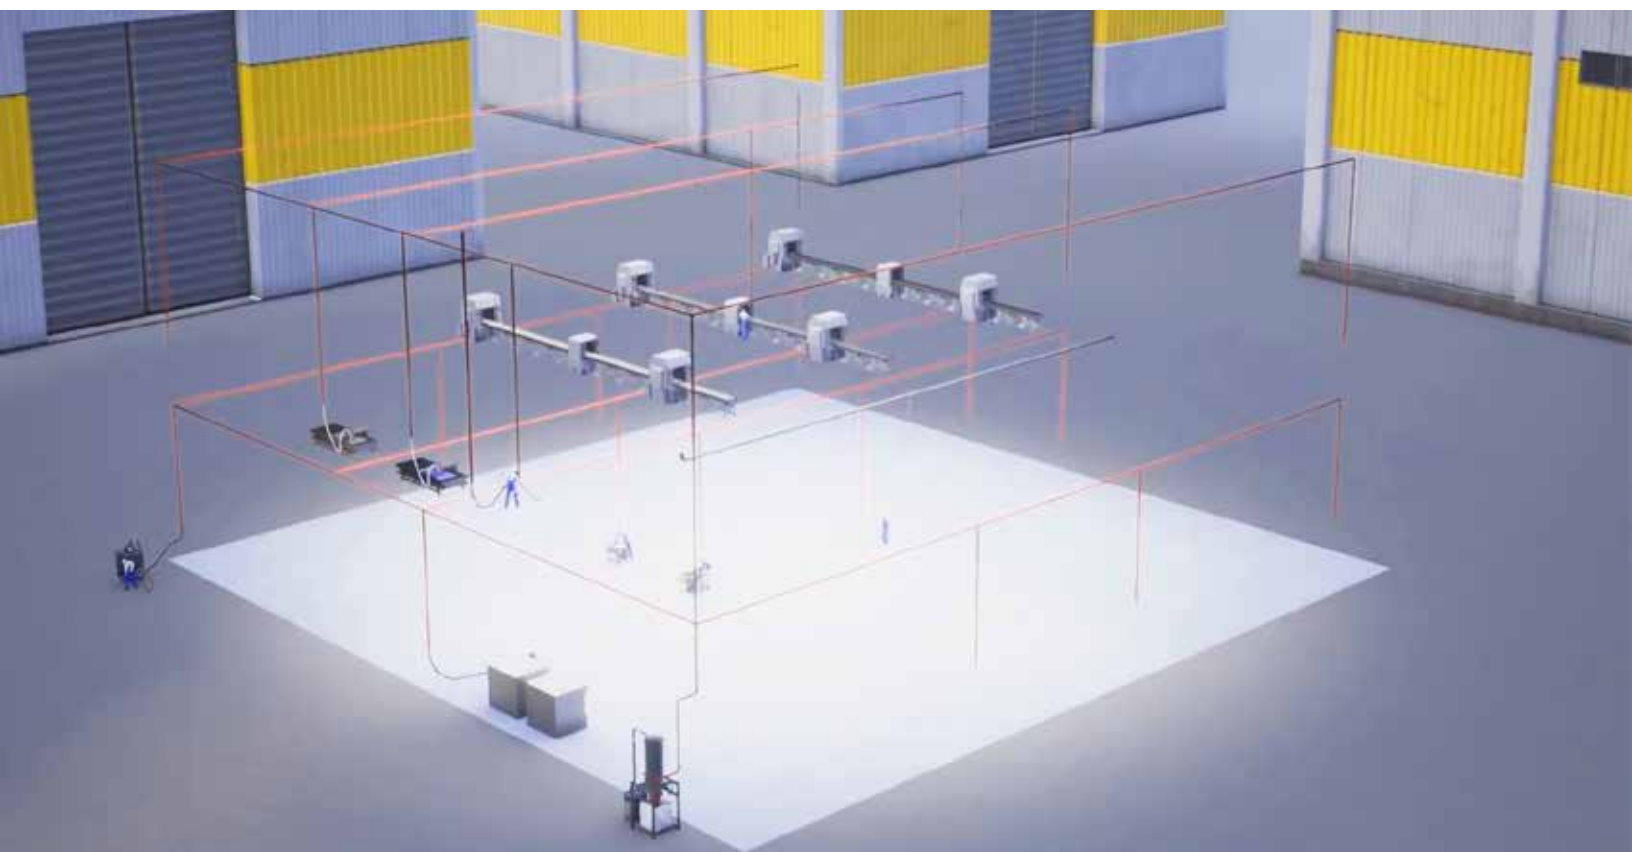

SAFETY

**PRODUCTIVITY
AND AUTOMATION**

**DIFFERENT SUCTION
POINTS WORKING
SIMULTANEOUSLY**

USER-FRIENDLY, CONVENIENT, EFFICIENT THE NEW ERA OF CLEANLINESS

SUCTION UNITS

- ✓ Power range: from 4.02 to 33.5 HP
- ✓ ATEX version available on request 
- ✓ Set-up for industry 4.0 

FILTER UNITS

- ✓ Cartridge filters with large surface
- ✓ Automatic filter cleaning systems
- ✓ Separators to increase both capacity and protection

DISCHARGE COLLECTION

Fixed or mobile systems available, with totally safe intermittent or continuous discharge

- ✓ Balanced flap
- ✓ Butterfly valve
- ✓ Sliding damper
- ✓ Rotovalve

ACCESSORIES COMPONENTS

- ✓ Wide range of components to customize the system
- ✓ Specific accessories for each application
