SUCTION UNIT

The suction unit is a side channel blower, with direct coupling between the motor and the impeller fan. It is designed without any transmission system, and is therefore quiet, totally maintenance-free and suitable for continuous duty operations.

FILTER UNIT

Thanks to the nylon filtering bag, a large quantity of material can be collected and easily disposed. A transparent rear window on the upper cover allows to keep the filling level of the filtering bag under control.

COLLECTION UNIT

The material is vacuumed from the top by a suction inlet placed on the upper cover and then is vertically collected in the collection bag. This way, the material is not collected at the entrance, thus preventing any clogging inside the vacuum system.
