SUCTION UNIT

The motor head is equipped with a Brushless motor; the lack of carbon brushes allows the use of the machine even in hazardous explosive areas. The motor is protected by a series of filters and it is turned on by an independent switch placed on a soundproofed and robust metal motor head.

The motor head includes a vacuum gauge and power light as standard.

FILTER UNIT

The large surface star antistatic filter, located inside the filter chamber, is made of polyester and provides high resistance against clogging and passage of fine dust. It is possible to clean the filter using an integrated mechanical system; an external lever shakes the filter vertically and enables to clean the filter thoroughly and safely, maintaining constant suction performance and preventing any dispersion of dust in the environment.

COLLECTION UNIT

The vacuumed material is placed inside an AISI304 stainless steel roll-out container mounted on wheels, which makes it possible to easily and safely dispose of.
